

DELTA®-VENT SA KEY MESSAGES FOR GENERAL CONTRACTOR CURRENTLY USING COMPETITOR SELF-ADHESIVE MEMBRANE

The superior technology of DELTA®-VENT SA is proven to keep buildings dry and comfortable for the life of the building, contributing to better building performance, energy efficiency, and customer satisfaction, and keeping your reputation intact.

- When applied, the full adhesion of DELTA®-VENT SA maximizes the air tightness – and it even passes the ASTM D1970 Nail Sealability test for sealing around fasteners – unlike with other mechanically fastened sheets
- The unique three-layer technology membrane design provides high tensile strength and the fourth layer of adhesive provides reliable long-term adhesion
- The DELTA®-VENT SA system is the *only* self-adhering WRB and air barrier with the security of a self-adhesive edge lap
- DELTA®-VENT SA leads the industry in vapor permeability with a rating of 50 perms
- DELTA®-VENT SA improves indoor air quality by preventing inward air leakage through the wall cavity, which in turn prevents VOCs and mold from entering the living space
- This level of complete protection not only helps with occupant satisfaction and comfort, but also contributes to fewer building issues and call-backs

The complete DELTA®-VENT SA system is designed with application in mind to ensure effective installation and help reduce time and labor costs.

- DELTA®-VENT SA's complete line of application accessories is designed to ensure every corner, gap, and edge is 100% sealed, meaning you can be confident that the job is done right, and that it meets the architect's specifications
- Fully adhered from back to edge, DELTA®-VENT SA allows for simple, straightforward application without any fasteners required. The unique edge lap then makes it easier to apply succeeding rows
- The DELTA® system includes DELTA®-FAS CORNER, DELTA®-MULTIBAND, DELTA®-FLEXX BAND, and DELTA®-FLASHING
- Working together, these elements create a strong air- and water-resistive system

Making the switch from other self-adhesive membranes is seamless with the complete support of DELTA® products.

- DELTA® provides very clear and comprehensive installation materials, videos, and technical manuals – the best in the industry – making installation easier, faster, and more reliable
- DELTA®-VENT SA has all the credentials you need based on the results of ASTM E2357 - 11 Standard Test Method for Determining Air Leakage of Air Barrier Assemblies:
 - Exceeds the toughest requirements of the Air Barrier Association of America (ABAA) and National Building Code of Canada (NBC 2010)
 - Meets International Building Code ICC AC 38 (US code requirements, relevant for International Building Code (IBC) and International Residential Code (IRC))
